

**ikan V2500e 2.5" TFT LCD Monitor**

**Retail \$99.95**

The ikan V2500e improves on the original V2500 in several ways. First and foremost it is built with a heavier duty case so its ready to be your work horse. It also has a higher resolution screen that is also brighter than the original. This allows you to see it better and get a better idea of what your shooting. To facilitate mounting it the V2500e also includes a threaded insert for mounting on a shoe or a stand. We have managed to pack all these improvements and still keep it at the low price of \$99.95

**Size Does Matter!**

The V2500e is so small and compact that you can take just about anywhere. Don't let its small size fool you, its rugged enough to survive the day to day torture of production work.

**Ready to Use**

When you get your V2500e home you will be able to plug it in and monitor video. The unit comes with its AC adapter and a video/audio breakout cable. With optional accessories such as the AC106s the monitor can be powered by batteries.

**More Control**

The V2500e allows you to control the Brightness, Constrast and Color. This comes in handy when you want to match up with other monitors. It also has a seperate input for video and audio. This will allow you to have less cable clutter and a cleaner more solid signal. If your not using audio just simply don't connect it.
